

1. app.py: Main app code. Remember to remove the following code snippet from the end of this file, since it is added in wsgi.py.

```
if __name__ == "__main__":  
    app.run(debug=True)
```

2. wsgi.py:

```
from app import app  
  
if __name__ == "__main__":  
    app.run(debug=True)
```

3. index.py

```
from wsgi import app
```

4. The repo MUST have a requirements.txt file which can be made using the following command in the venv (virtual environment):

```
pip freeze>requirements.txt
```

Then upload this to Vercel and select repo. Specify environment (.env) file (if any).
